

People-friendly scheduling

*When booking medical appointments,
patients deserve access and convenience.*

openDoctor

The real-time self-scheduling platform for patients and referring providers.

**Patients can schedule
online, anytime!**

**Increase scheduling
workflow efficiency**

**Streamline the referring
provider process**

openDoctor translates complex internal scheduling processes into patient-friendly online experiences in **real-time**.

What do we mean by real-time?

Just like the process of booking an airline seat, patients can see what is available and book their desired date and time instantly. When a patient books, your system is automatically updated using a bi-directional interface, so both patients and your schedulers always see up to date availability within your scheduling systems and online.

Talk to the experts in patient-friendly scheduling.

openDoctor is leveraging technology to bring you the scheduling experience patients are looking for. Plus, there are no long, drawn-out project timelines to get up and running. To get started, schedule a demo today.

How Does it Work?

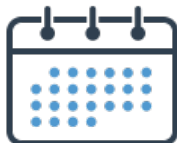

openDoctor makes it possible for patients and providers to book **real-time** appointments and complete the registration process online, not just make a "request" for an appointment. Here's how it works.

Schedule Appointment

Pre-Appointment Questionnaire

Our logic-based algorithms lead patients to the correct appointment type.

View the Schedule

Patients get a real-time view of all available time slots based on your scheduling rules and exceptions.

Insurance Eligibility

Verify in real-time and prior to the appointment.

Pay co-pay

Paperless Forms & Registration

Patients can complete forms online and at their convenience, reducing paper and saving time and money.

Reminders & Prep Instructions

100% of your patients can start receiving text & email reminders, resulting in reduced no-shows and better prepared patients.

Appointment Booked!

Booking is in real-time, meaning the booked time slot is seamlessly added to your EMR/RIS system via a bi-directional interface.

Mobile Check-In

When patients arrive for their appointment, they can check in instantly via their smartphone.
